

>**back office conversion (BOC)**< capture of item images and MICR information at merchant locations for the purpose of electronic transmission to a processing center, financial institution, or secondary institution for clearing. Eliminates the need to make a daily trip to the bank, cuts down on check fraud, and speeds up funds availability.

>**MirrorImage BOC**< was designed to address the need for item capture and deposit transmission at individual merchant locations. Utilizing a small check scanner like the Canon CR-180 or Panini MyVisionX the **back office conversion** module transforms your current paper based check deposit process into an ACH/Image-based deposit workflow.

The **back office conversion** module enables you to process checks in a single pass, validate their authenticity and forward them to your financial institution for deposit in either ACH or Image format (or both)-without a single paper check ever leaving your office.

back office conversion gives you the functionality of four modules in one: capture, proof, exchange and research.

back office conversion takes advantage of cutting-edge technology like CAR/LAR to automate the balancing process and limit the need for manual data entry.

back office conversion includes advanced features, such as automated deposit balancing, image quality assurance (IQA) and smart deposit decisioning.

MirrorImage BOC can generate both a NACHA formatted ACH file and/or an X 9.37/9.100-180 image exchange file depending on the mix of checks you deposit.

MIRRORIMAGE SUITE OF MODULES:

Jaguar Software is committed to developing and delivering check-imaging systems for financial institutions and businesses of all sizes.

Our ability to provide the very best product is accomplished by listening, understanding, and designing solutions that fit the needs of our customers.

Cost-effective digital check imaging can revolutionize your financial institution or company by reducing overhead, improving customer satisfaction, and enhancing workforce productivity. The recent passing of the "Check Clearing for the 21st Century Act" (Check 21) allows companies and financial institutions to further leverage the advantages of image processing.

Our MirrorImage Check Imaging System is a sophisticated, modular and user-friendly software solution consisting of the following modules:

- Image Capture/Branch Capture
- Image Repair/Read & Key
- Image POD
- Image Research
- Image Statements
- Check 21
- Image Archive/Distribution
- Document Imaging
- Remote Deposit
- Back Office Conversion
