Remote Deposit

Remote Deposit is cost effective to implement, easy to use, and will save you time and money.
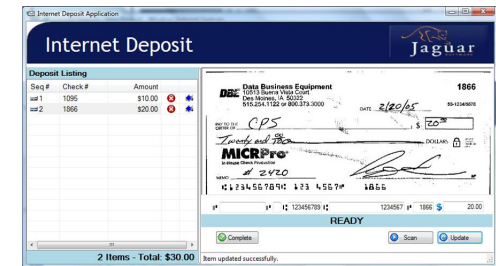

THE AFFORDABLE REMOTE DEPOSIT SYSTEM.

Remote Deposit is the capture of check images and MICR information for the purpose of electronic transmission to a financial institution for deposit. Remote Deposit, also referred to as Merchant Capture, eliminates the need for daily trips to the bank just to deposit checks received at your business. It not only reduces the trips to the bank but will increase funds availability and provides a check image archive with full feature research and reporting capabilities.

Remote Deposit utilizes a small desktop check scanner to transform your current paper based check deposit process into an image-based digital proof and electronic presentment workflow. Deposit items can be presented to your financial institution as an X9.37 file (the Federal Reserve Bank standard), as an ACH file, or a combination of ACH & X9.37. Adding IntelligentFields capability from Jaguar Software completes the process by providing the data required to update your accounting system.

IntelligentFileds allows the system to intelligently populate fields with previously entered data. Account information is provided in a CSV format to update your accounting system.

Remote Deposit from Jaguar Software is available as an in-house version for large volume customers, and a cloud based version for normal volume. Each product provides everything you need to transmit digital check images to your bank and update your accounts receivable system.

REMOTE DEPOSIT SAVES TIME & MONEY.

Jaguar's Remote Deposit applications enable you to process checks in a single pass, validate their authenticity, and forward them to your financial institution for deposit without a single paper check ever leaving your office or home. Remote deposit also:

• **Provides IntelligentFields which populates data required to create a posting file for your accounting system.**

• **Gives you the functionality of five modules in one: scan, balance, transmit, archive, and research.**

• **Takes advantage of cutting-edge technology in CAR/LAR to automate the balancing process and limit the need for manual data entry.**

• **Includes advanced features such as intelligent balancing, image quality assurance (IQA), and duplicate item detection.**

• **Generates X9.37 image exchange files, the file format certified by the Federal Reserve Bank for electronic check presentment.**

• **Generates ACH files for even quicker processing of checks.**

• **Allows you to consolidate multiple business locations into one deposit.**
